                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC The invention relates to a novel polynucleotide which is at CC least 95% identical with a sequence (ATCC 97285) encoding mature human CC extracellular protein-like/epidermal growth factor (EGF)-like protein, CC EEGF. Also included are the EEGF EGF domains, a vector containing CC the polynucleotide, a host cell containing the vector, anti-EEGF CC antibodies and antagonists of EEGF. The polynucleotide is used for crecombinant production of EEGF, in gene therapy, as hybridisation probes, CC as antisense antagonists and for chromosome identification. The protein is used to treat conditions that require inhibition of EEGF CC (e.g. vascular smooth muscle cell proliferation, Marfan syndrome, wound CC healing, neurological trauma, acquired immunodeficiency syndrome CC (AIDS)-related dementia, ocular disorders, kidney disorders, liver CC disorders, hair follicle growth promotion, burns, ulcers, corneal concisions, corneal inflammation, neoplasms and psoriasis), to raise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; ss; gene; extracellular protein-like protein; EGF-like; protein; epidermal growth factor; EEGF; ATCC 97285; gene therapy; vascular smooth muscle cell poliferation; Marfan syndrome; wound healing; neurological trauma; acquired immunodeficiency syndrome; AIDS-related dementia; ocular disorder; kidney disorder; liver disorder; hair follicle growth promotion; burn; ulcer; corneal incision;

This protein can be used to regulate and a second and the conditions of the protein or the condition of the conditions of the protein can also be used to treat senile dementia, ocular disorders such as a result or other CC damaging pathologies such as AIDS dementia. The protein can also be used to treat senile dementia, ocular disorders such as corneal inflammation, CC for targeting tunour cells, for treating kidney disorders, for liver CC enterating tunour cells, for treating kidney disorders, for liver CC enterating tunour cells, for treating kidney disorders, for liver CC enterating tunour cells, for treating kidney disorders, for liver CC enterating tunour cells, for treating kidney disorders, for liver CC enterating tunour cells, for treating wounds including CC enterating thromic conditions, of the body or resulting from trauma such as surgical incisions and skin grafting. The polypeptides can also be used CC treat thing chronic conditions, such as chronic ulcers, diabetic ulcers, conditions, such as chronic ulcers, diabetic ulcers, conditions, to treat Marfan syndrome, to CC differentiation of various epidermal and epithelial cells in vivo and in CC vitro and to stimulate embryogenesis. Antagonists to EEGF can be used to treat neoplasia such as cancers or tumours, skin disorders such as concers or tumours, skin disorders such as concerning.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes an artificial vascular graft (I) comprising a synthetic tubular element having a luminal surface coated with several endothelial cells (ECs) and/or smooth muscle cells (SMCs) genetically transformed to express at least one cell proliferating growth factor (CPGF) and a cellular adherence factor (CAF). (I) is useful for replacing or bypassing a portion of a vascular system of an individual, by implanting (I) into the vascular system of the individual, to form a fluid communication between the vascular system and the graft, where the synthetic tubular element of the graft is of an inner cross sectional area which is substantially equivalent to an inner cross sectional area which is substantially equivalent to an inner cross sectional area which is substantially equivalent to presents the human up50 cDNA sequence (also known as a developmental arteries and neural crest epidermal growth factor (ECF)-like protein (DANCE) gene), which is used in an example from the present invention (DANCE) gene), which is used in an example from the present sucentrical (DANCE) gene).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            muscle cells exp

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

modified polylinker; Site_1: EcoR I; Site_2: Not I;
UI-CF-EC1 is a normalized cDNA library containing the
following tissue(s): Normal lung from adult and from fetal
day 64, day 87, week 19 and week 42. The library was
constructed according to Bonaldo, Lennon and Soares,
Genome Research, 6:791-806, 1996. First strand cDNA
synthesis was primed with an oligo-dT primer containing a
Not I site. Double stranded cDNA was ligated to an EcoR I
adaptor, digested with Not I, and cloned directionally
into pT7T3-Pac vector. The oligonucleotide used to prime
the synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
(T1)18 tail. The sequence tag for this library is
                                                                                                                                                                                                                                                  TAG_TISSUE-Normal Lung

/note="Organ: pooled lung and spleen; Vector: pCMV-SPORT6;
Site_1: NotI; Site_2: EcoRV (destroyed); RNA source
anonymous pool of 24 week female lung, 16 week female
spleen, and 20-22 week male spleens. Library is oligo-dT
primed and directionally cloned (EcoRV Site is destroyed
upon cloning). Average insert size 1.4 kb, insert size
range 1-3 kb. Library is normalized and enriched for
full-length clones and was constructed by C. Gruber
(Invitrogen). Research Genetics tracking code 026. Note:
this is a NIH_MGC Library."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention provides mouse polypeptides for treatment of diseases due to abnormal proliferation of smooth muscle. The polypeptides can be produced by standard recombinant methodology. The polypeptides can be used according to their inhibition of the proliferation of vascular smooth muscle cells, particularly in treating arteriosclerosis or remarrowing by vascular endothelial thickening after percutaneous transuluminal coronary angioplasty (PTCA), or myoma, hematopoietic cell-regulatory activity, cytokine activity, tissue generation/reparation activity, actin/inhibitin activity, taxis and chemotaxis activity, blood coagulation/thrombotic activity, receptor/ligand activity, cadohelin/tumour metastasis inhibiting activity; tumor inhibition, and as nutrient. The present sequence represents the mature protein of the invention which can be used for modulating smooth muscle cell proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; Page 51-53; 70pp; Japanese.

                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence is the mouse A55 protein. The invention relates to the human A55 protein. The protein can be used for the treatment of diseases due to abnormal proliferation of smooth muscle. The polypeptides can be used according their inhibition of the proliferation of vascular smooth muscle cells, particularly in treating arteriosclerosis or re-narrowing by vascular endothelial thickening after percutaneous transluminal coronary angioplasty (PTCA), or myoma, haematopoletic cell-regulatory activity, cytokine activity, tissue generation/reparation activity, actin/inhibin activity, taxis and chemotaxis activity, blood coagulation/thrombotic activity, receptor/ligand activity, cadherin/tumour metastasis inhibiting activity; tumour inhibition, and as a nutrient.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    뭐
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                  The invention provides mouse polypeptides for treatment of diseases due to abnormal proliferation of smooth muscle. The polypeptides can be produced by standard recombinant methodology. The polypeptides can be used according to their inhibition of the proliferation of vascular smooth muscle cells, particularly in treating arteriosclerosis or renarrowing by vascular endothelial thickening after percutaneous transuluminal coronary angioplasty (PTCA), or myoma, hematopoietic cel regulatory activity, cytckine activity, tissue generation/reparation activity, actin/inhibitin activity, taxis and chemotaxis activity, bic coagulation/thrombotic activity, receptor/ligand activity, cadohelin/the present sequence represents the protein of the invention which caused for modulating smooth muscle cell proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cell proliferation; vascular; smooth muscle cell; arteriosclerosis; PTCA; endothelial thickening; percutaneous transuluminal coronary angioplasty; myoma; hematopoietic cell-regulation; cytokine; tissue generation; taxis; actin activity; chemotaxis; blood coagulation; thrombotic; tumor; mouse;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      can be modulated with agents that bind to these polypeptides, resulting in the death of the cells. The polynucleotides encoding these polypeptides are useful in the recombinant production of the polypeptides, as a hybridisation probe to screen libraries to isolate homologous sequences, or to map the gene. They may also be used for analysing genetic disorders, and to produce transgenic animals which are useful for the development and screening of therapeutically useful reagents. The polynucleotides can also be used in gene therapy e.g. to replace a defective gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention provides mouse polypeptides for treatment of diseases due to abnormal proliferation of smooth muscle. The polypeptides can be produced by standard recombinant methodology. The polypeptides can be used according to their inhibition of the proliferation of vascular smooth muscle cells, particularly in treating arteriosclerosis or remarrowing by vascular endothelial thickening after percutaneous transuluminal coronary angioplasty (PTCA), or myoma, hematopoletic cell-regulatory activity, cytokine activity, tissue generation/reparation activity, actin/inhibitin activity, taxis and chemotaxis activity, blood activity, actin/inhibitin activity, taxis and chemotaxis activity, blood coagulation/thrombotic activity, receptor/ligand activity, cadohelin/theorem the present sequence represents the protein of the invention which can be used for modulating smooth muscle cell proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel mouse polypeptides for treatment,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly adrenal, lung, colon, breast, prostate, rectal, cervical, or liver tumours, in mammallan subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders.

transmembrane polypeptide of related polypeptides -Isolated nucleic acid molecule encoding transmembrane polypeptide is useful for a PRO polypeptide which is a gene therapy and identification

Fig 10; 244pp; English.

polypeptide. pRO196, PRO44 PRO365, PRO13 PRO248, PRO35 PRO337, PRO14 PRO6004, PRO3 present sequence represents a human secreted and transmembrane ypeptide. The specification describes human polypeptides, designated 196, pRO444, pRO183, PRO185, pRO210, pRO215, pRO217, pRO242, pRO288, 1965, pRO1361, pRO1308, pRO1183, pRO1272, pRO1419, pRO4999, pRO7170, 1976, pRO1318, pRO1318, pRO1940, pRO933, pRO301, pRO187, pRO4941, pRO49456, pRO265, pRO941, pRO10096, pRO6003, 1937, pRO1411, pRO4956, pRO266, pRO265, pRO941, pRO10096, pRO6003, pRO10096, pRO940, pRO5003, pRO94003, pRO5003, pRO9400, pRO5003, pRO94003, pRO94003, pRO94003, pRO94003, pRO15003, pRO94003, pRO9

Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumours, such as prostate and breast tumours, in mammalito screen for modulators of the compounds . mammals and

Claim 11; Fig 408; 774pp; English.

sequences AAU29024-AAU29328 represent PRO polypeptides of the invention. The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, catts, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate

EEGF. Also included are the EEGF EGF domains, a vector containing the polynucleotide, a host cell containing the vector, anti-EEGF antibodies and antagonists of EEGF. The polynucleotide is used for recombinant production of EEGF, in gene therapy, as hybridisation probes, as antisense antagonists and for chromosome identification. The protein used to treat patients who require EEGF, to identify specific antagonists, used to treat conditions that require inhibition of EEGF (e.g. vascular smooth muscle cell proliferation, Marfan syndrome, wound healing, neurological trauma, acquired immunodeficiency syndrome (AIDS)-related dementia, ocular disorders, kidney disorders, liver classify, and follicle growth promotion, burns, ulcers, corneal inclusions, corneal inflammation, neoplasms and psoriasis), to raise

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
This invention describes a novel composition containing (apart from a carrier or excipient), a novel PRC245 polypeptide (I), its agonist or antagonist, or their fragments, for modulating: (1) infiltration of infilammatory cells into tissue; (ii) an immune response; or (iii) T cell proliferation. The composition increases or decreases any of the effects (i)-(iii). The products of the invention have anti-inflammatory, anti-dabetic activity. (I), and its (ant)agonists and their fragments, are used to treat immune-related diseases, particularly T cell-mediated diseases. The diseases treated include particularly T cell-mediated diseases. The diseases treated include cystemic lupus erythematosus, rheumatold arthritis, juvenile chronic arthritis, spondyloarthropathies, systemic sclerosis (scleroderma), idiopathic inflammatory myopathies (dermatomyositis, polymyositis), Sjogren's syndrome, systemic vasculitis, sarcoidosis, autoimmune hemolytic anemia (immune pancytopenia, paroxysmal nocturnal hemolytic anemia (immune pancytopenia, paroxysmal nocturnal).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Inflammatory cell infiltration; immune response; T cell proliferation; anti-inflammatory; anti-autoimmune; anti-diabetic; spondyloarthropathy; T cell-mediated disease; spondyloarthropathy; sclerosis; renal disease; inflammatory myopathy; hemolytic anemia; thrombocytopenia; thyroiditis; diabetes mellitus; demyelinating polyneuropathy; Guillain-Barre syndrome; multiple sclerosis; polyneuropathy; hepatitis; cirrhosis; enteropathy; sclerosing cholangitis; inflammatory bowel disease; Whipple's disease; skin disease; dermatitis; psoriasis; asthma; allergic rhinitis; tumor; food hypersensitivity; urticaria; eosinophilic pneumonia; transplant; diopathic pulmonary fibrosis; graft rejection; PRO245; human; PRO217;

                                                                                                                                              molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ota
                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                              The invention relates to primers for synthesising full length cD clones. 830 cDNA molecules encoding a human protein have been clones and nucleotide sequences of 5'- and 3'-ends of the cDNA isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA

smooth muscle cell growth, vasculogenesis, restenosis

or

```
cc library. AK647 homologues in chicks and rodents are involved in aortic clisue development. The spatial and temporal distribution of AK647 consists of that it acts as an a modulator of smooth muscle cells in colorated that it acts as an a modulator of smooth muscle cells in colorated that it acts as an a modulator of smooth muscle cells in colorated that it acts as an a modulator of smooth muscle cells in colorated in a mutritional source or supplement. The primary structure of colorated in a mutritional source or supplement. The protein shows both inhibitory and cell discrete in may also be used in the treatment of immune deficiency and cell disorders, including severe combined immunodeficiency (SCID), HIV and consists include a role in the treatment of immune deficiencies and certain include a role in the regulation of haematopoiesis and in the certain include a role in the regulation of haematopoiesis and in the certain include a role in the regulation of haematopoiesis and in the certain include a role in the regulation of haematopoiesis and burns. The polynucleotides and proteins can be used for preventing, treating or ameliorating smooth muscle cell growth, vasculogenesis, restenosis, can be used for promoting and degeneration. The proteins can be used for promoting smooth muscle cell growth, catherin/tumour cellulogenesis, rand tumour inhibition activity, AK647 specific cell growth or promoting smooth muscle cell growth or catherin/tumour cellulogenesis. The proteins and polynucleotides can also be used for cell growth or catherin/tumour cellulogenesis. The proteins and polynucleotides can also be used for cellulogenesis. The proteins and polynucleotides can also be used for cellulogenesis.

                                                                                                                                                                                                                                                                                                                                           This sequence is the human A55 protein of the invention. The protein can be used for the treatment of diseases due to abnormal proliferation of smooth muscle. The polypeptides can be used according their inhibition of the proliferation of vascular smooth muscle cells, particularly in treating arteriosclerosis or re-narrowing by vascular endothelial thickening after percutaneous transluminal coronary angioplasty (PTCA), or myoma, haematopoletic cell-regulatory activity, cytokine activity, tissue generation/reparation activity, actino/inhibit activity, taxis and chemotaxis activity, blood coagulation/thrombotic activity, taxis and chemotaxis activity, cadherin/tumour metastasis inhibiting activity; tumour inhibition, and as a nutrient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               vascular smooth muscle cell; arteriosclerosis; tissue reparation; myoma; vascular endothelial thickening; haematopoletic cell regulator; cytokine percutaneous transluminal coronary angioplasty; blood coagulation; PTCA; actin; inhibin; chemotaxis; thrombosis; cadherin; therapy:
                                                                                                                                                                                                                                                                                                                    Sequence
